React

# How to Setup React JS Project using NPM

## Ways to setup ReactJS

There are two ways to set up an environment for successful ReactJS application. They are given below.

Using the **create-react-app** command

18.3.1

## Using the create-react-app command

- Install NodeJS and NPM

NodeJS and NPM are the platforms need to develop any ReactJS application. You have to install NodeJS here (NPM package manager will automatically install whenever Nodejs installed).

Make sure you have nodejs installed. If not installed. To verify NodeJS and NPM, use the command as shown below.

03

```
C:\Users\username>node -v
```

```
v12.13.0
```

```
C:\Users\username>npm -v
```

```
6.13.6
```
